

*October 12, 2015***ANNOUNCEMENT****on the Successful Completion of  
Roman Compressor Station Investment Project**

**Societatea Națională de Gaze Naturale ROMGAZ S.A. will commission on October 12, 2015 Roman Compressor Station, an investment based on the feasibility study for Roman field on evaluation of geological resource/gas in place and of production rate, assessing the reserves enhancement as a result of gas compression.**

The new compression facility installed on Roman Structure provides access to 500 million cm natural gas. Following the commissioning tests, the flow rate increased by 176,000 cm/day and it will continue to increase during exploitation.

Completion of this project compensates the drop of reservoir energy due to depletion of production units and increases the recovery factor. At the same time, access to National Transmission System and the supply and distribution services in the north half of Moldova are improved.

Romgaz allocates increasing resources for refurbishment and modernization of current facilities and for new investments in order to increase operational performance required to maintain the current level of gas supply and in order to meet an increased consumption.
